DATA SHEET

Reagent: HLTat Cells

Catalog Number: 1293

Lot Number: 96127

Release Category: C

Provided: 8.1 x 10^6 cells/vial.

Propagation Medium: DMEM (4500 mg/L glucose), 90%; fetal bovine serum, 10%.

Freeze Medium: DMEM, 70%; fetal bovine serum, 20%; DMSO, 10%.

Growth Characteristics: Split twice weekly 1:10. HLTat cells are stable and do not need to be maintained in selection medium. If growth in selection medium is desired, propagation medium containing 500 µg/ml G418 should be used. The culture flask should be changed every two weeks.

Sterility: Negative for bacteria, fungi and mycoplasma.

Description: HLTat^1 contains stably integrated copies of the HIV-1 LTR promoter linked to a synthetic one-exon tat gene.

Special Characteristics: This cell line was generated by cotransfection of HeLa cells with pSV2neo and with pL3tat, which contains the HIV-1 LTR promoter, synthetic first tat exon, and the SV40 polyadenylation signal. Clone HLTat was selected in geneticin (G418) on the basis of high-level production of the one-exon Tat. When transfected with HIV DNA, these cells allow high-level expression of a variety of HIV genes. Contains LTR sequences to +80 in the R region. Contains the entire U3 region, but lacks U5 sequences.

Recommended Storage: Liquid nitrogen

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
Contributor: Dr. Barbara K. Felber and Dr. George N. Pavlakis.
