Reagent: Anti-HIV Immune Globulin (HIVIG)

Catalog Number: 3957

Lot Number: 170021

Provided: 1 mL diluted, purified antibody at 50 mg/mL. HIV-IG is a 5% protein solution in 0.9% NaCl. The preparation contains no preservatives, buffers or stabilizing agents.

Host: Human

Titer: The user should determine the optimal concentration for any application.

Sterility: Sterile, non-pyrogenic solution

Description: Anti-HIV Immune Globulin (HIVIG) is prepared from pooled plasma of asymptomatic, HIV antibody positive donors.

Special Characteristics: All donors were required to have CD4+ counts above 400/µL. In addition, donors were negative for HBsAg and anti-HCV. The donors were selected for high titer p24 antibody and test negative for HIV antigen when plasma units are tested by EIA. Ninety-five percent or more of the protein in the preparation has the electrophoretic mobility of gamma globulin. Greater than 90% of the gamma globulin is monomeric.

The plasma pools were inactivated. Product safety was evaluated by testing each lot of HIVIG for negative results on p24 antigen by EIA, HIV culture and HIV DNA PCR.

Recommended Storage: Keep the reagent at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.

Contributor: NABI and National Heart Lung and Blood Institute (Dr. Luiz Barbosa)

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
