Simian Immunodeficiency Virus Infectious Molecular Clone pSIVsmE660-807-24w Env

Catalog No. HRP-20097
This reagent is the tangible property of the U.S. Government.

For research use only. Not for use in humans.

Contributor and Manufacturer:
Vanessa M. Hirsch, D.V.M., D.Sc., Laboratory of Molecular Biology, National Institute of Allergy and Infectious Diseases (NIAID), National Institutes of Health (NIH), Bethesda, Maryland, USA

Product Description:
HRP-20097 is a full-length, infectious molecular clone of the simian immunodeficiency virus (SIV), SIVsmE660-807-24w Env which is available through NIH HIV Reagent Program (HRP-20122).1,2 SIVsmE660-807-24w Env is a chimeric variant of SIVsmE660-FL14 (HRP-20120; GenBank: JQ864087.1) encoding envelope gene (GenBank: JQ864168) cloned at 24 weeks following infection of an FL14-inoculated macaque and exhibits Tier 3 neutralization antibody resistance.1,2,3 The plasmid encodes full-length, replication-competent virus in a pUC19 vector backbone. The ampicillin resistance gene, aph, provides transformant selection through ampicillin resistance in Escherichia coli (E. coli). The pSIVsmE660-807-24w Env insert is approximately 10,300 base pairs and the resulting size of the plasmid is approximately 14,000 base pairs. The insert sequence is provided on the NIH HIV Reagent Program webpage.

Material Provided:
Each vial contains plasmid DNA in TE buffer (10 mM Tris-HCl, 1 mM EDTA). The DNA concentration and volume provided are shown on the Certificate of Analysis. The vial should be centrifuged prior to opening. Note: The contents of the vial should be used to transform the plasmid in E. coli prior to mammalian expression.

Packaging/Storage:
HRP-20097 was packaged aseptically in screw-capped plastic cryovials. The product is provided frozen and should be stored at -80°C or colder immediately upon arrival. Freeze-thaw cycles should be avoided.

Citation:
Acknowledgment for publications should read “The following reagent was obtained through the NIH HIV Reagent Program, NIAID, NIH: Simian Immunodeficiency Virus Infectious Molecular Clone pSIVsmE660-807-24w Env, HRP-20097, contributed by Dr. Vanessa M. Hirsch.”

Biosafety Level: 1

Disclaimers:
You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the NIH HIV Reagent Program Material Transfer Agreement (MTA). The MTA is available on our Web site at www.hivreagentprogram.org.

While the NIH HIV Reagent Program uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. Neither ATCC® nor the U.S. Government warrants that such information has been confirmed to be accurate.

This product is sent with the condition that you are responsible for its safe storage, handling, use, and disposal. ATCC® and the U.S. Government are not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to ensure the authenticity and reliability of materials on deposit, the U.S. Government, ATCC®, their suppliers and contributors to the NIH HIV Reagent Program are not liable for damages arising from the misidentification or misrepresentation of products.

Use Restrictions:
This material is distributed for internal research, non-commercial purposes only. This material, its product or its derivatives may not be distributed to third parties. Except as performed under a U.S. Government contract, individuals contemplating commercial use of the material, its products or its derivatives must contact the contributor to determine if a license is required. U.S. Government contractors may need a license before first commercial sale.
